

# The Costes Pathway

Des falaises de Roquefort au Rougier

Sentier des Costes (Roquefort Tourisme)

This getaway is accessible to all and provides a spectacular view over Roquefort, the village where «the king of cheeses» is manufactured and that extends at the foot of the Combalou cliffs.

This family trail offers you to gaze at the cheese-making village of Roquefort from a perfect but unusual perspective. In the shade of buisnières, of hardwood and softwood trees and in the hearth of an agro pastoral landscape, reach the right bank of the Souzlon brook and discover the village of Roquefort stretching along the Combalou rock side. An unobstructed view to enjoy!

## Useful information

Practice : Trekking

Duration : 2 h

Length : 6.9 km

Trek ascent : 297 m

Difficulty : Easy

Type : Loop

Themes : Geology

# Trek

**Departure** : Roquefort Tourist Office

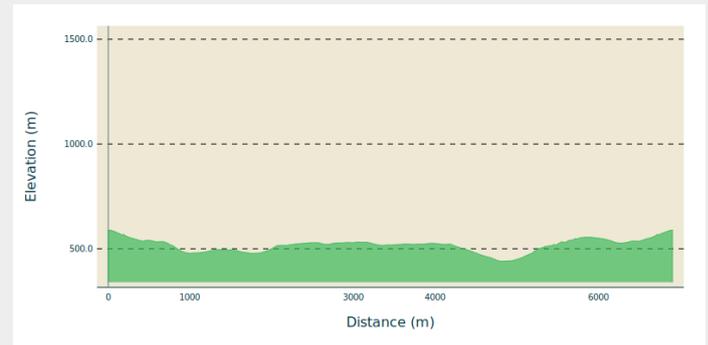

**Arrival** : Roquefort Tourist Office

**Markings** : — PR

**Cities** : 1. Roquefort-sur-Soulzon

2. Saint-Rome-de-Cernon

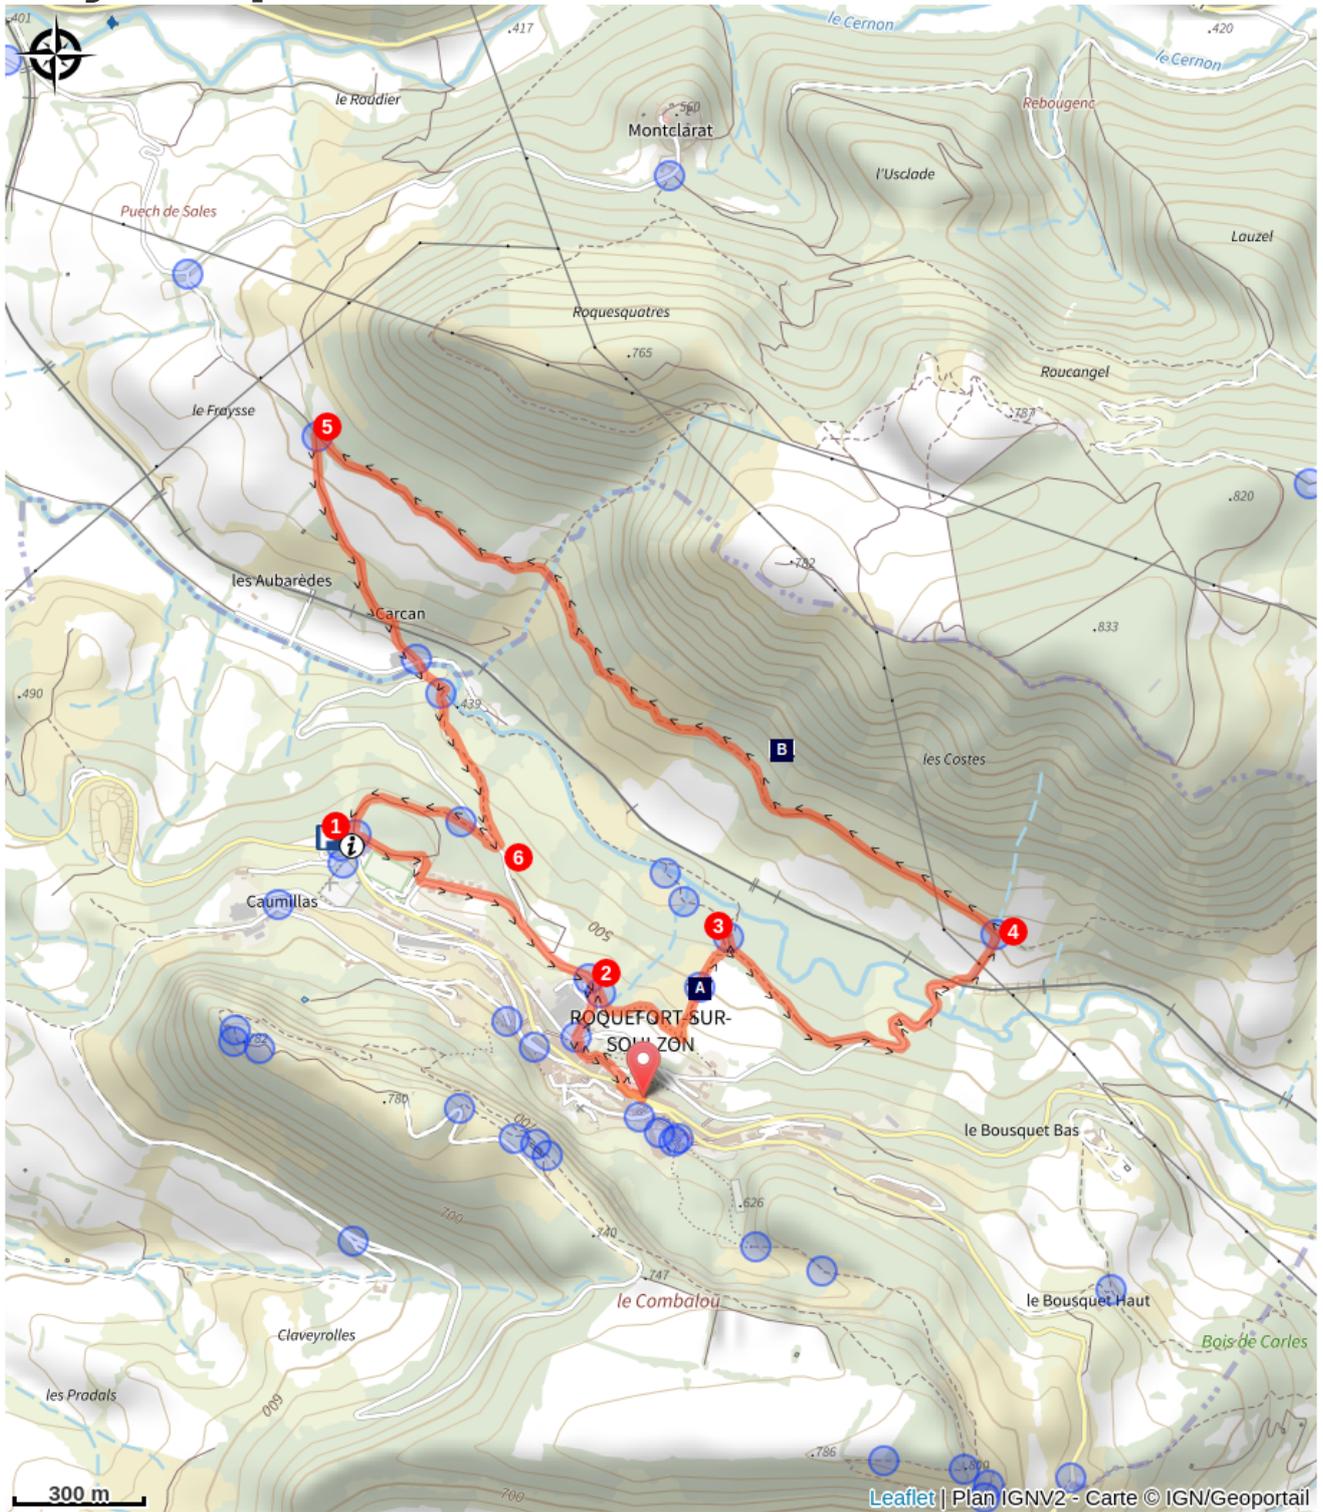

## Altimetric profile

Min elevation 440 m Max elevation 589 m

1. Opposite the Tourist Office, turn to the left and take the trail that runs along the football stadium up to the drinking water tap. When reaching the end of the stadium, leave the trail and turn right on a small path. Walk through the housing estate via a tarmac road. Carry straight ahead up to the large white and green building.
2. Leave the building on your right and head to the left to pass behind the municipal workshops, then take left a small shady path. 200 m further on, walk down to the left on a wooden log path up to the intersection of four tracks.
3. Turn right and keep on going up to the road, turn left and walk down to the gatekeeper's house. Cautiously cross the railway, then walk uphill to enter a narrow path lined up with hedges.
4. Then head towards left on a track following the contour line and enjoy the view over Roquefort and the neck de basalte (old volcanic vent). 1500m further on, at the edge of the woodland, walk above a vineyard and carry straight on.
5. When reaching a junction with another trail, appreciate the lovely jasse (sheepfold) in front of you. Turn to the left, walk down to the railway and cross it. Walk across the Soulzon brook and turn left to take the path through the woodland. A few metres further, turn to the right and walk uphill to the road.
6. Walk across the road to reach a path which rises throughout the Conteyne woodland up to the Tourist Office.

# All useful information

## **Is in the midst of the park**

This itinerary is located in the World Heritage zone Causses and Cévennes, mediterranean agropastoral cultural landscape.

## **Advices**

Box tree moths are active from May to October. During the caterpillar phase, they feed on the leaves of box trees. They crawl down trees and move on long silken threads, although these threads are annoying when hiking they do not pose any health risk

## **Gear**

Prévoir une réserve d'eau et une tenue adaptée

## **How to come ?**

### Transports

Travel by bus or train: <http://www.mobimipy.fr/>

Carpooling : [BlaBlaCar](#), [Rézo Pouce](#), [Covoiturage-libre](#), [Idvroom](#), [LaRoueVerte](#), [Roulez malin](#)

### Access

Roquefort-sur-Soulzon is situated 25 km southwest of Millau via the D 992, D 999 and D 23 and is 14 km from St-Affrique via the D999 towards Millau. In Lauras, take the roundabout towards Roquefort via the D 23.

### Advised parking

Parking de l'Office de Tourisme

# On your path...

---

## Buissière (A)

A buissière is a path lined with boxwood hedges forming a narrow green corridor typical of the Causses, adapted to a harsh and contrasting climate. These dense double hedges once protected livestock from wind, winter snow, and summer heat, while preventing animals from straying.

Used by shepherds, local inhabitants, and carts alike, the buissière made travel easier between hamlets, pastures, sheepfolds, and water sources, bearing witness to traditional agricultural practices.

Today, the box tree moth, active from May to October, threatens these hedges by stripping them of their leaves. Although the caterpillars can be a nuisance for hikers, they are harmless.

## Neck de Basalte (B)

In the midst of the Larzac limestone foothills, we can see a homogeneous and easily identifiable green-grey mass in the rock with round shapes called Roque-Nègre. This geological formation running through the ochre-coloured limestone body looks as if it were an old chimney, but is actually an old volcanic vent called a « Neck de Basalte.
